Let's Start!

A Look to the History of OS

Learning Outcome:

Build the application installation program, using IT development tools available in the market, based on solution architecture features.

Understands the concepts of server, its characteristics and its relation with operating systems.

Ask your partner:

- What was the first Operating System you used? How was it?
- What are the main changes in OS?

Can Do Statements:

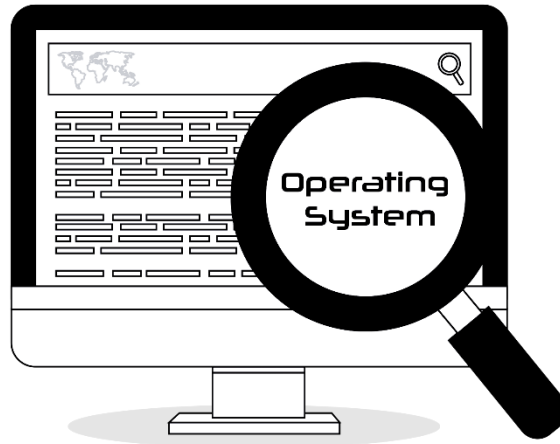

- I can understand written information about operating systems history.
- I can answer questions related to operating systems history.
- I can write a short paragraph about the most important events on operating systems history.

Let's Explore!

TheHistory of OS*

* The letters "OS" stand for Operating System

Instructions: Read the text below.

Brief History of Operating Systems

Operating systems were first created in the middle of the 20th century, they helped to control computers which could be as big as an entire room. Since then, OS have changed the way users approach them, their design, interactivity, and speed among other features. Let's have a review of their major characteristics.

The first generation of Operating Systems was quite experimental. They had a lot of mechanical components and were very big. They needed human operators to configure the hardware as the machine operated and could execute only one program at a time, which took a long time.

The second generation of OS wasn't designed to have one user at a time, it led to a model of 'modes of operations'. Some users were not allowed to perform all types of actions in the OS, instead, it introduced the basic concepts of administrator and users, and developed transistors and printed circuits.

Why was the third generation known as the multi-programmed Batch Systems? The answer lies on the Small-scale Integrated Circuits, which were used by these OS, they allowed the CPU to run more than one job at a time, interrupting programs while they were waiting for their processes to finish. However, human operators had to pre-read magnetic tapes and run them sequentially.

For almost thirty years, we have had the four generation of OS. The concept of Personal Computer was introduced, and it has provided security and privacy to the user. Also, it has emphasized on the use of multitasking, running many more processes than before but still gaining control on the computer. As time passes by, OS becomes faster and more user-friendly.

**Let's Practice!**

Don't forget to check some important facts about operating systems history.

Instructions: Read the sentences. Write the missing word(s) in the blank.

Use: In 1945 / Since / a long time / For almost thirty / in the middle of.

1. Operating Systems were first created _____ 20th century.
2. _____ the first generation of OS, people conceived a new way to manage their information.
3. _____ years, we have had the four generation of OS.
4. _____, the first generation of Operating Systems was created as an experimental project.
5. For _____, the Operating Systems had a lot mechanical relays, and they were really big.

**Let's Practice!****A Brief History of Operating Systems**

Instructions: Organize the mystery sentence. Read the sentences aloud. Check your pronunciation with your instructor.

1. the / years? four / of / OS / for / thirty / used / Was / almost / generation

2. personal / Security / computers. / the concept of / were / the user / with provided to / and privacy

3. control of / processes. / used to / actions / Multitasking / were / gain / the computer

4. Were / control unit? / a / the first / run / machines / from / generation

Extension Activity

Let's go back in time!

Instructions: Complete the following steps. Fill in the Self-Assessment.

- Find information about the most important events on operating systems history.
- Select the most important events.
- Organize the information in a timeline.
- In a piece of cardboard, present the timeline and describe to your partners the most important events on operating systems history.

Self-Assessment

Yes

No

- I find information about the most important events on operating systems history. ☐ Yes ☐ No
- I organize the information in a timeline ☐ Yes ☐ No
- I describe to my partners the most important events on operating systems history. ☐ Yes ☐ No

Target Words

- instead** (adverb): an alternative or substitute for something or someone.
e.g. Some users were not allowed to perform all types of actions in the OS. Instead, it introduced the basic concepts of administrator and users.
- lie** (verb): to remain or be located in a place.
e.g. The answer lies on the Small-scale Integrated Circuits, which were used by these OS.
- major** (adjective): great in size, big.
e.g. Let's have a review of their major characteristics.
- tape** (noun): a piece of plastic with a magnetic band inside to store information.
e.g. However, human-operators had to pre-read magnetic tapes and run them sequentially.
- user-friendly** (adjective): easy to understand and use.
e.g. As time passes by, OS become faster and more user-friendly.

Learning Points

Simple past passive- all forms.

You use the passive form when you do not know the agent of the sentence or you do not want to mention it.

You can use the **passive voice in past simple** to talk about actions in the past. You use this tense when you want to focus on the action and not on the person who did the action.

Look at the forms of the **passive voice in past simple**:

Interrogative:

*Wh word + subject + **was / were** + verb in p. participle*

*Example: What **was done** to help the customer?*

Negative:

*Subject + **was / were + not** + verb in p. participle*

*Example: Internet **was not created** until 1969.*

Affirmative:

*Subject + **was / were** + verb in p. participle*

*Example: This Operating System **was created** in 1995.*

Remember you don't have to say who did the action, however you can mention the agent with the preposition by.

Examples

- *Operating systems were first created in the middle of the 20th century.*
- *The second generation of OS wasn't designed to have one user at a time.*
- *Why was the third generation known as the multi-programmed Batch Systems?*

Operating Systems: History Summary

Operating systems have evolved a lot through the years, they have had important changes along the time.

Learning Points

History of Operating Systems	
Years	Characteristics
1945 - 1955	✓ Room full of armoires ✓ One program had control over the computer ✓ Programs accessed the hardware one at a time ✗ There were not libraries ✗ Computer processing time was wasted
1955 - 1965	✓ Transistors and printed circuits ✓ Commercial machines ✓ User run the job and had printed output ✗ One job at a time ✗ Long waits ✗ Had to mount and unmounts tapes and card decks
1965 - 1980	✓ Small-scale Integrated Circuits ✓ Executed four jobs or more ✓ Multiprogramming ✗ Waste of time while waiting instructions to complete
1980 - Present	✓ Large Scale Integration ✓ Multiple users to single users ✓ Multitasking

Examples

- *The first generation of Operating Systems was quiet experimental.*
- *For almost thirty years, we have had the four generation of OS. The concept of Personal Computer was introduced.*
- *They have also emphasized on the use of multitasking, running many more processes than before.*
